

CySA+ (Cybersecurity Analyst)

The CSA+ certification acronym has changed to CySA+ on June 29th, 2018. The exam code will remain the same.

Strengthen Your Agency's Ability To Combat Malware And Threats Using Behavioral Analytics!

CompTIA Cybersecurity Analyst (CySA+) is an international, vendor-neutral cybersecurity certification that applies behavioral analytics to improve the overall state of IT security. CySA+ validates critical knowledge and skills that are required to prevent, detect and combat cybersecurity threats. The certification and training empowers your employees to analyze, monitor, and protect critical government infrastructure using threat detection and threat-analysis tools.

As attackers have learned to evade traditional signature-based solutions such as firewalls, an analytics-based approach within the IT security industry is increasingly important for most organizations. The behavioral analytics skills covered by CSA+ identify and combat malware, and advanced persistent threats (APTs), resulting in enhanced threat visibility across a broad attack surface.

A career in information security analysis ranked seventh on U.S. News and World Report's list of the 100 best technology jobs for 2017. According to the Bureau of Labor Statistics, the median pay for an information security analyst is \$90,120 per year.

SecureNinja's CySA+ training and certification boot camp is available in day, weekend or evening sessions in Alexandria, VA or boot camp only options in Dulles, VA and San Diego, CA. We also offer convenient Live Online delivery anywhere in the world as well as customized course offerings for groups.

Get Cybersecurity Training By The Worlds Best CSA Instructors at SecureNinja!
