

Linux+

Course Description and Overview

CompTIA Linux + powered by LPI is a high stakes, vendor-neutral certification that validates all fundamental knowledge and skills required of all Linux administrators.

Topics Covered

The exams cover system architecture; Linux installation and package management; GNU and Unix commands; devices, Linux filesystems, and the Filesystem Hierarchy Standard. Professionals who pass the exam can work at the Linux command line, perform maintenance tasks, assist users, and install and configure workstations.

Who Would Benefit

Entry-level Linux IT administrators

Pre-requisites

There are no prerequisites for the Linux+ training or exams, however, CompTIA A+, CompTIA Network+ and at least 1 year of Linux administration experience is recommended before taking this course.

Required Exams

XK0-005

Course Length

40 Hours

Follow On Courses

Earning the certification is a stepping stone to vendor-specific training, such as Oracle Certified Associate and Novell SUSE Linux programs.
